- **Distinction between Related Aspects**

Case: room → trigger "fridge key would not work"
→ opinion "would not work"
score=0.1917 → negative ×

check-in → trigger "key card do not work"
→ opinion "key card do not work"
score=0.8263 → negative √

Competing retrieved evidence with ranked scores

when we get to the room, we key card would not work on the door.

Ranking favors the more consistent aspect match

Note: The higher score suppresses the weaker room hypothesis and keeps the prediction aligned with the check-in aspect.
