
Input
Output
D: great location, room could have be better great staff...only complaint be that the room be the size of a closet...
E: evidence set
Document-aware evidence matching in KASM
1st step LLM extracts
L
E
2nd step evidence
Conditioned on the whole reviews, the LLM annotates aspect-related knowledge:
aspect, trigger, opinion, and polarity tuples.
Match review fragments to aspect-conditioned evidence:
Fragment: "great location …"
Evidence: (location, great location, great, pos)
Fragment: "great staff"
Evidence: (service, staff, great, pos)
Fragment: "room … size of a closet"
Evidence: (room, closet, too small, neg)
Appending to document evidence set
Evidence set supports document-level retrieval and sequence modeling
